

SPRINT BACKLOG APRIL 16 - APRIL 22			
Product Backlog Item	Not Started	In Progress	Completed
<p>Handling of Multiple Files</p> <p>As an election official, I want to be able to handle ballots from different locations So that all the ballots are counted properly.</p> <p>Acceptance Criteria: The software must be able to handle multiple files. When separating the file names with a special character, the software will then be run with each file processed separately.</p>	Refactor the program to be able to take in multiple files - Thomas		
	Change the audit and media files to work with multiple files - Thomas		
	Changing of the UI to handle multiple files - Henry		
	Unit Testing - Roshina		
	System Testing - Linh		
<p>Invalidation of Ballots</p> <p>As an election official, I want to invalidate the ballots in IRV So that I can ensure the precision, fairness, and security of the elections.</p> <p>Acceptance Criteria: The system should validate each ballot by checking whether at least half of candidates are ranked or not. Otherwise, it will be considered invalid.</p>	Determine which ballots are to be invalidated		
	Remove invalid ballots from the election		
	Unit Testing		
	System Testing		
<p>Process Popularity Only File</p> <p>As an election official, I want to be able to process the PO election ballot So that we can see the results after the election.</p> <p>Acceptance Criteria: When the software is run with a CSV file that begins with "PO", it will process information about the candidates and the number of ballots that are contained in the file.</p>	Create popularity only voting algorithm		
	Handling of CSV file with popularity only election information		
	Calculate results of popularity only election		
	Display popularity only results to screen		
	Unit Testing		
	System Testing
