<b>Handling of Multiple Files</b>  As an election official, I want to be able to handle ballots from different locations So that all the ballots are counted properly.  Acceptance Criteria: The software must be able to handle multiple files. When separating the file names with a special character, the software will then be run with each file processed separately.			Refactor the program to be able to take in multiple files - Thomas
		Unit Testing - Roshina	Change the audit and media files to work with multiple files - Thomas
		Fixing the system testing to be compatible with the latest UI design for handling multiple files - Linh Duong	Changing of the UI to handle multiple files - Henry
<b>Invalidation of Ballots</b>  As an election official, I want to invalidate the ballots in IRV So that I can ensure the precision, fairness, and security of the elections.  Acceptance Criteria: The system should validate each ballot by checking whether at least half of candidates are ranked or not. Otherwise, it will be considered invalid.			Determine which ballots are to be invalidated - Henry
			Remove invalid ballots from the election - Thomas
		Unit Testing - Linh	
		System Testing - Roshina	
<b>Process Popularity Only File</b>  As an election official, I want to be able to process the PO election ballot So that we can see the results after the election.  Acceptance Criteria: When the software is run with a CSV file that begins with "PO", it will process information about the candidates and the number of ballots that is contained in the file.	Handling of CSV file with popularity only election information - Thomas		
	Display popularity only results to screen - Henry		
	Unit Testing - Linh Duong		
	System Testing - Roshina
